SUMMARY

Software engineer building full-stack web apps with React, TypeScript, Next.js, Go, Postgres, and Redis, including real-time chat, AI features, and third-party API integrations. B.S. in Computer Science with a minor in Human-Computer Interaction from Virginia Tech.

SKILLS

Languages: TypeScript, JavaScript, Go (Golang), SQL, Java, Python

Frontend: React, Next.js, Vite, Tailwind CSS, MUI, shadcn/ui, Radix UI, HTML/CSS

Backend and Data: Node.js, Supabase, Firebase, WebSockets, PostgreSQL (Postgres), Redis

Tools and Testing: Git/GitHub, Docker, Vercel, Postman, Vitest, Jest, Playwright, React Testing Library

AI: LLM API integration (Gemini), RAG, embeddings (pgvector), prompt engineering, structured extraction

EXPERIENCE

Coding Instructor & Outreach Coordinator

Code Ninjas

July 2026 – Present, Newcastle, WA

- Teach programming fundamentals to an average of 50 students ages 5-14 each week across block-based coding, JavaScript, Lua, and Unity tracks, debugging code live and explaining errors at each student's level.
- Plan and run community events through partnerships with schools, PTAs, businesses, and community organizations.
- Redesign the center's AI Academy curriculum to cover modern AI tools and concepts.
- Taught 10 summer camps averaging 12 students each, covering mobile app development, circuitry, and game development.

PROJECTS

Proofstack

getproofstack.vercel.app · May 2026 – Present

- Shipped a Next.js/Supabase portfolio tool that syncs a developer's GitHub repos and generates evidence-backed project briefings and cited Q&A.
- Implemented retrieval-augmented chat using Gemini embeddings stored in pgvector, pairing README similarity search with structured project metadata so answers still work when vector search is unavailable.
- Added GitHub OAuth through Supabase Auth with tenant-isolated data, paginated and cached repository sync, signed GitHub webhooks, and opt-in-only AI processing for private repositories.

Guidepost

guidepost-ai.vercel.app · January 2026 – May 2026

- Developed a Next.js/Supabase job search platform that parses PDF resumes with Gemini and scores listings 0-100 with explanations, batching 5 listings per request to cut AI API calls.
- Automated daily job discovery with Vercel Cron and SerpAPI, running quota-aware searches with deduplication and location/remote filtering.
- Modeled an application pipeline with a PostgreSQL trigger that logs status history, powering Recharts funnel and response-rate analytics.

LivePulse

livepulse-hq.vercel.app · December 2025 – April 2026

- Built a real-time event chat platform with Go, Next.js, Clerk, Neon Postgres, and Upstash Redis for event-specific chat rooms.
- Implemented concurrent Go WebSocket hubs with Clerk JWT auth, origin allowlisting, message validation, and worker-pool event processing.
- Load tested the deployed app with 10 concurrent authenticated clients: 500 messages at 250ms p95 round-trip latency with zero failures.

TuneTeaser

tuneteaser.web.app · September 2023 – June 2026

- Designed a React/TypeScript music trivia app that turns Spotify libraries, public playlists, and custom track lists into adaptive "Name That Tune" rounds using iTunes previews.
- Deployed a Spotify API proxy on Firebase Cloud Functions (Cloud Run) for playlist search, profile discovery, and URL imports, keeping credentials server-side and reducing reliance on user OAuth.
- Engineered server-authoritative gameplay in Firebase for private multiplayer rooms, scoring, and leaderboards, with normalized guess matching, App Check enforcement, and scheduled cleanup jobs.

EDUCATION

Bachelor of Science in Computer Science

Minor in Human-Computer Interaction (HCI) · Virginia Tech · Blacksburg, VA · May 2023
