SUMMARY

Software engineer building applications with React, TypeScript, Java, and Go. Projects combine interactive interfaces with authenticated APIs, Postgres and Redis, real-time features, and AI integrations.

SKILLS

Languages: TypeScript, JavaScript, Go (Golang), SQL, Python, Java

Frontend: React, Next.js, Vue, HTML, CSS, Tailwind CSS, Material UI (MUI)

Backend and Data: Node.js, Django, Spring Boot, REST APIs, WebSockets, PostgreSQL, MongoDB, Redis, Supabase, Firebase

Cloud and DevOps: Git, GitHub Actions, CI/CD, Docker, Kubernetes, Vercel, Google Cloud Platform (GCP), AWS Lambda

Testing: Vitest, Jest, React Testing Library, Playwright, Go testing (Testify), Postman

AI Integration: Gemini API, retrieval-augmented generation (RAG), pgvector, structured extraction, Claude, Codex

EXPERIENCE

Coding Instructor & Outreach Coordinator

Code Ninjas **July 2026 - Present, Newcastle, WA**

- Teach programming fundamentals to an average of 50 students ages 5-14 each week across block-based coding, JavaScript, Lua, and Unity tracks, debugging code live and explaining errors at each student's level.
- Plan and run community events through partnerships with schools, PTAs, businesses, and community organizations.
- Redesign the center's AI Academy curriculum to cover modern AI tools and concepts.
- Led 10 summer camps averaging 12 students each, covering mobile app development, circuitry, and game development.

PROJECTS

Proofstack

getproofstack.vercel.app • May 2026 - Present

- Shipped a Next.js/Supabase interview-preparation tool that syncs GitHub repositories and generates evidence-backed project briefs and cited Q&A.
- Built a project-brief editor with authenticated saves, ownership checks, and conflict handling to prevent overwriting newer updates.
- Implemented GitHub OAuth, tenant-isolated data, paginated and cached repository sync, signed webhooks, and opt-in AI processing for private repositories.
- Combined pgvector retrieval with structured metadata to preserve answers when vector search is unavailable.
- Added Vitest regression tests for authentication, repository sync, webhook validation, and retrieval fallback.

TuneTeaser

tuneteaser.web.app • September 2023 - June 2026

- Built a responsive React/TypeScript music trivia app using Spotify playlists and custom track lists, with iTunes snippets expanding from 2 to 30 seconds after incorrect guesses.
- Deployed a Spotify API proxy on Firebase Cloud Functions (Cloud Run) for playlist search, profile discovery, and URL imports, keeping credentials server-side.
- Implemented server-authoritative Firebase scoring and round advancement, rejecting late guesses and direct client score writes; added App Check enforcement and scheduled recovery/cleanup jobs.

LivePulse

livepulse-hq.vercel.app • December 2025 - April 2026

- Built a real-time event chat platform with a Next.js frontend, Go API, Clerk authentication, PostgreSQL, and Redis.
- Implemented concurrent Go WebSocket hubs with JWT authentication, origin allowlisting, message validation, and worker-pool event processing, applying distributed systems patterns for shared state and coordination.
- Added chat connection-status and recovery controls with exponential-backoff reconnection and authenticated replay of up to 100 persisted messages.
- Load tested the deployed app with 10 concurrent authenticated clients: 500 messages at ~250 ms p95 round-trip latency, zero failures.

EDUCATION

Bachelor of Science in Computer Science

Minor in Human-Computer Interaction (HCI) • Virginia Tech • Blacksburg, VA • May 2023

- Earned 2nd place among 41 teams at the Virginia Tech Undergraduate Research in Computer Science Symposium for Hokie Bucket List, a four-person capstone project.
