SUMMARY

Software engineer building deployed web applications, real-time systems, API integrations, and AI-assisted tools using React, TypeScript, Next.js, Go, PostgreSQL, and Redis. Background in Human-Computer Interaction with a focus on product-minded engineering.

SKILLS

Languages: TypeScript, JavaScript, Go (Golang), SQL, Java, Python

Frontend Tools: React, Next.js, TanStack, Vite, Tailwind CSS, MUI, shadcn/ui, Radix UI, HTML/CSS

Backend and Data: Node.js, Supabase, Firebase, WebSockets, PostgreSQL (Postgres), Redis

Developer and Platform Tools: Git/GitHub, Vercel, Cloudflare, Netlify, Postman, Docker

AI Tools: LLM API integration, MCP, prompt engineering, structured extraction, AI-assisted development

Testing: Vitest, Jest, Go test, React Testing Library, Playwright, JUnit

EXPERIENCE

Software Engineering AI Trainer

Outlier

April 2026 – Present

- Train and evaluate large language models on coding tasks by designing prompts, tests, and review criteria from real-world engineering scenarios.
- Conduct adversarial testing to surface model failure modes in generated code and UI implementations, identifying edge cases and reasoning gaps for correction.
- Select the strongest response from competing model outputs and author scoring rubrics to standardize evaluation criteria across reviewers.

PROJECTS

TuneTeaser

tuneteaser.web.app/ · September 2023 – Present

- Built a React/TypeScript music trivia app that turns Spotify libraries, public playlists, and custom track lists into adaptive “Name That Tune” rounds with iTunes previews.
- Implemented a Firebase Cloud Functions v2 Spotify proxy backed by Cloud Run for public playlist search, profile playlist discovery, and URL imports, using app credentials to avoid browser-side secrets and reduce dependence on user OAuth.
- Developed server-controlled Firebase gameplay systems including private multiplayer rooms, authoritative scoring, leaderboard updates, normalized guess matching, App Check enforcement, and scheduled cleanup jobs.

LivePulse

livepulse-hq.vercel.app/ · December 2025 – April 2026

- Built a real-time event chat platform with Go, Next.js, Clerk, Neon Postgres, and Upstash Redis for event-specific chat rooms.
- Implemented concurrent Go WebSocket hubs with Clerk JWT auth, origin allowlisting, message validation, and worker-pool event processing.
- Integrated Ticketmaster ingestion with 6-hour scheduled refreshes, startup sync, on-demand search, event filtering, and expired-event cleanup.
- Load tested deployed chats with 10 authenticated clients, achieving 47 messages/sec, 250ms p95 latency, and zero failures across 500 messages.

Guidepost

guidepost-ai.vercel.app/ · January 2026 – March 2026

- Built a Next.js/Supabase job search platform for resume-based discovery, 0-100 AI match scoring, saved jobs, analytics, and application tracking.
- Implemented Gemini-powered resume parsing and job match scoring, extracting structured profiles from PDF uploads and batch-scoring listings 5 at a time to reduce AI API calls while returning explanations for each match.
- Automated daily job discovery with Vercel Cron and SerpAPI, running quota-aware daily searches with automatic deduplication, location/remote filtering, 14-day admin log retention, and 30-day Supabase backup retention.

ScoreSeeker

scoreseeker.netlify.app/ · January 2025 – November 2025

- Built a Next.js sports app with React, MUI, Tone.js, and Netlify, supporting 20,000+ team search and live, past, and upcoming game views.
- Integrated TheSportsDB through secure server-side API routes, protecting API keys while normalizing inconsistent score and schedule data.
- Developed reusable hooks/components for search, dark mode, async loading/error states, date/time formatting, and score-driven audio snippets.

EDUCATION

Bachelor of Science in Computer Science

Minor in Human-Computer Interaction (HCI) · Virginia Tech · Blacksburg, VA · 2023
