SUMMARY

Software Engineer specializing in full-stack web applications and AI-integrated tools, with hands-on experience building with React, TypeScript, Go, and LLMs across the development process. Currently creating independent production projects with a design sensibility shaped by coursework in Human-Computer Interaction (HCI).

SKILLS

Languages: JavaScript, TypeScript, Java, Python, SQL, Go (Golang), C

Frontend Tools: React, Next.js, TanStack, Vite, Tailwind, MUI, Radix UI, HTML/CSS

Backend and Data: Node.js, Postman, Supabase, Firebase, Snowflake, Postgres, Redis

Developer and Platform Tools: Git/GitHub, Vercel, Cloudflare, Netlify, Railway, Jira, Docker, AWS Lambda

AI Tools: Windsurf, Codex, MCP, LLM API integration, Prompt engineering, Context architecture

INDEPENDENT SOFTWARE PROJECTS

LivePulse

livepulse-hq.vercel.app/ · December 2025 – April 2026

- Built a real-time event chat platform using Go, Next.js, Clerk, Neon Postgres, and Upstash Redis, allowing users to join event-specific chat rooms.
- Implemented concurrent Go WebSocket hubs with Clerk JWT auth, origin allowlisting, message validation, and worker-pool event processing.
- Integrated Ticketmaster ingestion with 6-hour scheduled refreshes, startup sync, on-demand search, event filtering, and expired-event cleanup.
- Load tested deployed chats with 10 authenticated clients, achieving 47 messages/sec, 250ms p95 latency, and zero failures across 500 messages.

Guidepost

guidepost-ai.vercel.app/ · January 2026 – March 2026

- Built a full-stack job search platform with Next.js, TypeScript, Supabase, Gemini, SerpAPI, and Vercel, centralizing resume-based job discovery, 0 to 100 match scoring, saved jobs, analytics, and application tracking in one shadcn/Radix UI dashboard.
- Implemented Gemini-powered resume parsing and job match scoring, extracting structured profiles from 10MB PDF uploads and batch-scoring listings 5 at a time to reduce AI API calls while returning explanations for each match.
- Automated daily job discovery with Vercel Cron and SerpAPI, searching up to 5 result pages per query with deduplication, location/remote filtering, 14-day admin log retention, and 30-day Supabase backup retention.

ScoreSeeker

scoreseeker.netlify.app/ · January 2025 – November 2025

- Built a full-stack Next.js sports app with React and MUI, supporting 20,000+ team search and live, past, and upcoming schedule views.
- Integrated TheSportsDB through secure server-side API routes, protecting API keys while normalizing inconsistent score and schedule data.
- Improved reliability through local fallback search, off-season schedule detection, score normalization, and timezone-aware date formatting.
- Developed reusable hooks/components for debounced search, pagination, dark mode, async loading/error states, and Tone.js audio playback.

TuneTeaser

tuneteaser.web.app/ · September 2023 – April 2024

- Built a React/TypeScript music trivia app that transforms Spotify playlists and liked songs into a personalized “Name That Tune” game with adaptive snippets from 2s to 30s.
- Implemented Spotify OAuth with PKCE, token refresh, guest mode, and paginated Spotify Web API loading for playlists, liked songs, and tracks.
- Developed normalized partial-match validation, randomized track selection, and HTML5 audio playback using iTunes previews, increasing clip length by 2s after incorrect guesses.

Hokie Bucket List – Capstone Award Winner

bucketlist-90b4c.web.app/ · January 2023 – April 2023

- Led a 4-person team in designing, building, and testing a social hiking app, coordinating HCI-informed wireframes, user research, implementation, and pilot testing.
- Developed a responsive React interface backed by Firebase, supporting cross-device usability and core social features for hike/event discovery, planning, and tracking.
- Earned 2nd place out of 41 teams at the Virginia Tech Undergraduate Research in Computer Science Symposium.

EDUCATION

Bachelor of Science in Computer Science

Minor in Human-Computer Interaction (HCI) · Virginia Tech · Blacksburg, VA · 2023
